Helioseal® F Plus

Protection for pits and fissures

Permanent molar before and after the
application of Helioseal® F Plus.

Precise dispensing

Helioseal® F Plus is a light-curing, white-pigmented, fluoride-releasing fissure sealant. It comes in a syringe, which allows the product to be precisely dispensed and applied [2]. With the fine tip the sealant is applied quickly and accurately without overfilling the fissure.

Excellent flow properties

Helioseal F Plus is flowable and it is easy to distribute on intricate surfaces – even in the upper jaw [1]. The tight marginal seal provides protection against cariogenic germs [2–4]. Fine filler particles ensure a smoothly sealed surface [2].

Fast curing

With the help of an appropriate curing light, such as Bluephase Style or Bluephase G4, Helioseal F Plus can be cured in only ten seconds [2]. Due to its short light-curing time, precise application and excellent flow and wetting properties, the sealant offers fast and efficient treatment in children and adolescents [2].

Helioseal® F Plus – The efficient fissure sealant

Advantages

New formulation featuring optimized consistency

Precise dispensing and application

Reduced exposure time [2]

Benefits

Optimum distribution on the intricate surfaces of pits and fissures [1]

Efficient treatment [2]

Fast, comfortable treatment for children [2]

Helioseal® F Plus deliver forms

Helioseal F Plus
Syringe containing
1.25 g

Helioseal F Plus
Cavifil containing
0.1 g
